

Digital View/ERG agreement results in a complete connectivity solution for flat panel displays

DV's recent agreement with Endicott Research Group has resulted in new a solution kit which can be used with almost any digital flat panel

London, 5 July 2004. LCD solution kits which enable virtually any size, resolution or form of digital flat panel display to be connected directly to virtually any signal output source are now available from Digital View. The kits are the result of an agreement between DV and Endicott Research Group (ERG), the Seattle-based supplier of the industry's widest range of DC-AC inverters for powering backlit flat panel displays

Complementing DV's range of controller boards and accessories, ERG's DC-AC inverters support products from all major manufacturers of CCFL-and EL-backlit LCDs and offer a broad range of standard and custom solutions. Digital View will include the ERG inverters, customized to the customer's needs, in its new LCD solution kits, and ERG has created special interface cables to enable a direct connection between its inverters and Digital View controller boards.

"The kits will include our flat panel controller boards, on-screen display (OSD) boards, LCD interface cards, and all necessary interconnection cabling, as well the ERG inverter that matches the specifications for the LCD panel to be backlit." said Dusty Perryman, Sales Manager at Digital View. "It will give our customers a one-stop shop solution for everything they need to get their panel up-and-running, including full manufacturing and engineering support from both Digital View and ERG."

The agreement between Digital View and ERG means that the companies will be promoting and supporting each other's products, creating a mutually beneficial relationship that will help

their distribution partners, developers and OEM customers. The relationship is expected to benefit new and existing customers since both companies can now assist with a complete solution once a panel has been chosen.

Digital View

Established in 1995, Digital View Group Digital View is one of the world's leading suppliers of advanced connectivity solutions for the flat panel digital display market. Underpinned by exceptionally strong internal development engineering, the company has an established international reputation for excellent customer support and product reliability. As well as a wide range of sub-system products, such as interface controllers, for OEM applications, the company is a world leader in the implementation of out-of-home advertising and digital signage networks. The company has over 250,000 such systems deployed across the world in sectors which include medical, broadcast, marine, retail and transport.
